Core stack Python · FastAPI · React · TypeScript · PostgreSQL · Docker · n8n · OpenAI · Java · Spring Boot · Node.js · GitHub Actions

SUMMARY

Full Stack Developer and **UTN graduate**. I build complete products end to end: data model, REST API, frontend, authentication and security, Docker and CI, backed by **more than 3,000 automated tests** across my projects. My edge is **AI on two fronts**: I build it into products (assistants that answer customer queries over WhatsApp, Telegram and email, LLM-based analysis and writing, n8n automations) and I use it as a development team with a method: Spec-Driven Development, subagents, persistent memory and TDD. I pick up new stacks fast and know how to direct AI to ship quickly without cutting corners on quality.

EXPERIENCE

Freelance Full Stack Developer · Self-employed

2026 – present · Mendoza, Argentina

- Design and build custom online-ordering apps for **small food businesses**: installable PWA with menu, cart, delivery zones and WhatsApp ordering, plus an orders dashboard for the business.
- Generate my own leads with **Anzuelo**, the AI-powered CRM I built: it finds businesses, detects their pain points and drafts the first outreach.
- For each business I gather requirements, present a working demo that opens on their phone, and prepare the commercial proposal and quote.

PROJECTS

Anzuelo · AI-powered prospecting CRM — Used daily

Video demo · Private repo

n8n · OpenAI · Apify · FastAPI · PostgreSQL · SQLAlchemy · React · TypeScript · Docker · GitHub Actions

- Automates the whole sales pipeline with **8 n8n workflows**: Google Maps scraping (Apify), GPT-4o-mini analysis and scoring, personalized messages, SMTP email, IMAP replies classified by AI, Cal.com meetings and failure alerts.
- Controlled outreach: a queue with daily limits and sending hours enforced by the API, per-inbox warm-up with an automatic pause when bounces rise, and human approval on WhatsApp and Instagram to avoid bans.
- FastAPI REST API with **90 endpoints**, React + TypeScript PWA, conversion metrics by industry, channel and template, 2FA with Argon2, GitHub Actions CI and **more than 1,800 tests**.

Active Trace · Multi-tenant academic management platform

Video demo · GitHub

FastAPI · SQLAlchemy async · PostgreSQL · React · TypeScript · TanStack Query · Tailwind · Docker · OpenTelemetry

- Sits on top of Moodle: imports grades, flags students falling behind based on each course's passing threshold, and runs bulk messaging with an approval step, processed in a queue by a background worker.
- **7 roles**, each with its own home view and permissions, with data isolated per institution; also covers meetings, oral exams, teaching teams and instructor payments.
- Security by design: JWT with rotating refresh tokens, 2FA, Argon2, **AES-256 encryption** of national ID, tax ID and bank account numbers, and an append-only audit log. OpenTelemetry tracing and **more than 1,300 tests**.

Atendo · AI customer service for e-commerce — UTN capstone project

Video demo · GitHub

n8n · GPT-4o-mini · FastAPI · PostgreSQL · React · Docker · Grafana

- AI assistant that answers on **WhatsApp, Telegram and email**: classifies the intent (question, order status or complaint), replies using the real catalog and policies, and escalates complaints as tickets.
- Automates post-sale: processes each order, deducts stock, confirms the sale and notifies the customer.
- Lab-measured: from 49.13 s to 0.063 s per order (**780x**) and **92.7% accuracy** classifying queries.

FoodStore · Ordering and management platform for food businesses

Video demo · GitHub

FastAPI · PostgreSQL · React · TypeScript · TanStack Query · WebSockets · MercadoPago · Cloudinary · Docker

- Storefront with **MercadoPago** payments (HMAC-signed webhook) and a dashboard with **real-time orders over WebSockets**, an order state machine with audit trail, stock and sales metrics.
- 4 roles enforced on the backend, JWT with rotating refresh tokens, layered architecture and nearly 100 Pytest tests.

Candela Cartoons · Classic cartoon streaming with a retro CRT look

Video demo · Private repo

React · Node.js · Express · SQLite · Puppeteer · HLS · Docker

- **17 resolvers**, one per third-party video host (40+ domains), built by **reverse engineering** each web player: JavaScript deobfuscation, AES-128 decryption, proof-of-work challenges, internal APIs and Puppeteer interception.
- Domain-based registry with HTTP-to-Puppeteer fallback, SQLite cache that honors each host's expiry, and a custom **HLS proxy** that rewrites playlists and refreshes expired tokens; accounts, favorites, watch progress and 96 test files. Educational project: hosts no video.

Planova · Kanban task manager

Video demo · GitHub

Java · Spring Boot · JWT · React · TypeScript · Tailwind · MySQL · Docker

- **Spring Boot** REST API with JWT and ownership checks on every request; Kanban board with drag & drop, priorities and automatic due dates; the whole stack starts with a single Docker command.

AI-ASSISTED DEVELOPMENT · HOW I WORK

- **Spec-Driven Development (SDD) with OpenSpec**: proposal, specs, design and tasks before writing code, so the AI builds on clear requirements instead of assumptions.
- **Organic Driven Development (ODD)**: per-feature task plans, one commit per unit of work and small, reviewable *stacked PRs*.
- **Agent orchestration in Claude Code**: subagents to explore, implement and verify, and **context window** management so the model stays on track in long tasks.
- **Persistent memory with Engram** across sessions and **MCP** servers (Context7 for up-to-date documentation, CodeGraph for the code graph).
- **Quality**: strict TDD (red, green, refactor), adversarial review with independent reviewers and evidence-based verification before calling anything done.

TECHNICAL SKILLS

Backend	Python, FastAPI, SQLAlchemy (async), Java, Spring Boot, Node.js, Express, REST APIs, WebSockets, JWT
Frontend	React, TypeScript, JavaScript, TanStack Query, Tailwind CSS, Vite, PWA, HTML, CSS
Databases	PostgreSQL, MySQL, SQLite, MongoDB
AI & automation	n8n, OpenAI (GPT-4o-mini), LLMs, prompt engineering, WhatsApp, Telegram and email bots
Scraping	Puppeteer, Apify, reverse engineering of web players, HLS streaming
Quality & DevOps	Pytest, TDD, Docker, GitHub Actions, OpenTelemetry, Grafana, Git and GitHub
Security	2FA (TOTP), Argon2, AES-256 encryption, rate limiting, audit logging
AI for development	Claude Code, OpenSpec, Engram, MCP (Context7, CodeGraph)

EDUCATION

Associate Degree in Programming

Graduated 2026

National Technological University (UTN) · Mendoza, Argentina

- Capstone: **Atendo**, AI-driven customer service automation for e-commerce.
- OOP, data structures and algorithms, databases and software architecture.

LANGUAGES

- **Spanish**: native
- **English**: technical (reading and writing)
